RNP transfection reagent for genome editing
jetCRISPR®

- Specifically designed for co-delivery of Cas protein and guide RNA
- High genome editing efficiency
- Excellent cell viability and morphology
- Fast and reliable gene editing
- Easy to use: Reverse and Forward protocols

 Superior genome editing efficiency:

JetCRISPR® | Lipofectamine® CRISPRMAX™

RNP transfections were performed in AS49 and HEK-293 cell lines following standard protocols.

Excellent cell viability and morphology:

- HEK-293
- A549

RNP transfections were performed in HEK-293 and A549 cell lines following standard protocols.

Fast and reliable genome editing:

<table>

</tbody>
</table>

1.5 ml of jetCRISPR® transfection reagent is sufficient to perform ca. 300 transfections in 6-well plates.
