

Injectable non-viral vector for gene therapy

Deliver DNA & siRNA/miRNA easily and safely with our injectable *in vivo*-jetPEI® delivery reagent.

Several quality grades available from research to pharmaceutical grade for direct injection in humans for Gene therapy.

GMP *in vivo*-jetPEI® already administrated in several clinical trials

- Safe & secure
- Manufactured in compliance with US and EU GMP guidelines
- Dedicated technical and regulatory support team

Gene Therapy

Clinical trials in humans

in vivo-jetPEI®-PC successfully used in a wide range of animal models

- Manufactured with stringent release specification
- Customized manufacturing quality controls
- Specialized scientific support

Preclinical studies

Proof of concept in animal model

in vivo-jetPEI® cited in over 700 publications

- For any nucleic acid, any administration route and any animal model
- Safe and easy to use
- Tailored protocol provided by PhD experts

Academic research and R&D

in vivo experiment in animal model
